Directions for A.E.H. Contributors

The *Archives of Environmental Health* publishes articles dealing with the effects of environmental agents on human health. These include epidemiological, clinical, or experimental studies of man. Relevant studies using animals will be considered. "Environment" involves occupational or personal environments as well as the global environment, land, water and air.

Priority will be given to studies of various environmental agents which affect human populations and to the adverse health effects due to such exposures. Topics of current concern include health significance of toxic waste, new energy technology and industrial processes, and the environmental causation of neurobehavioral dysfunction, birth defects, cancer, and chronic degenerative disease.

Full-length manuscripts should not exceed eight printed pages regardless of the combination of text, illustrations, and references. Critical Reviews of topics of current concern may be considered. The topic and brief outline should be submitted to the editors before writing the Review. Groups of papers such as proceedings of workshops or symposia will be considered for publication by special arrangement with the editors.

Brief Communications: Pithy articles of 1500 words or less and no more than two illustrations will receive expeditious handling. Such *Communications* may include critical analyses of current problems and issues.

Regardless of their length, manuscripts reporting experimental findings will not be accepted unless the data have been subjected to appropriate statistical analysis. This stipulation may extend to a requirement for suitable replication of the experiment where this is practical.

PROCEDURES

The *Archives of Environmental Health* maintains two regional editorial offices in addition to its main office. To expedite processing, manuscripts should be submitted to the appropriate editorial office.

The Americas, Asia, and Australia: Kaye H. Kilburn, M.D., University of Southern California, School of Medicine, 2025 Zonal Avenue, Hoffman Research Building, Los Angeles, CA 90033.
